Box I	Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)
This inte	mational search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:
1.	Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely:
:	
2.	Claims Nos.: because they relate to parts of the international application that do not comply with the prescribed requirements to such
	an extent that no meaningful international search can be carried out, specifically:
3.	Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).
Box II	Observations where unity of invention is lacking (Continuation of item 2 of first sheet)
	rnational Searching Authority found multiple inventions in this international application, as follows:
1.	As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2.	As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3.	As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
4.	No required additional search fees were timely paid by the applicant. Consequently, this international search report is
	restricted to the invention first mentioned in the claims; it is covered by claims Nos.:
Remark	on Protest The additional search fees were accompanied by the applicant's protest. No protest accompanied the payment of additional search fees.

Form PCT/ISA/210 (continuation of first sheet (1)) (July1998)

International application No. PCT/SE02/01378

This international Searching Authority found multiple inventions in this international application, as follows:

- 1. Claim 1a completely and parts of claims 2-3, 5, 8, 10, 12 and 28-34, a method of analysing circularised nucleic acid by directly detecting concatemeric amplification product of said nucleic acid.
- 2. Claims 1b and 13-27 completely and parts of claims 2-3, 5, 8, 10, 12, and 28-34, a method of analysing circularised nucleic acid by carrying out a further signal generating reaction on a concatemeric amplification product of said nucleic acid. Said invention may at a further search be found to relate to two separate inventive concepts.
- 3. Claims 1c, 4, 6-7, 9, 11 completely and parts of claims 2-3, 5, 8, 10, 12, and 28-34, a method of analysing circularised nucleic acid by monomerising a concatemeric amplification product of said nucleic acid before analysing said product.

According to Article 34(3)(a-c) and Rule 13.2, an international application shall relate to one invention only or to a group of inventions linked by one or more of the same or corresponding "special technical features", i.e. features that define a contribution which each of the inventions makes over the prior art.

Direct detection of concatemeric amplification product of circularised nucleic acid is known in the art, see e.g. US5854033. Consequently, analysis of circularised nucleic acid by concatemeric amplification of said nucleic acid is known in the art, no other technical feature unifying the three invention have been found.

Invention 1 has been searched.
